It is certified that error appears in the above-identified patent and that said Letters Patent is hereby corrected as shown below:

In columns 21-22, lines 54-67 and 1-5, delete "Instead, the OD-NVOD server will transmit other data that is freely available to all customers as available from opportunistic program storage 1104 or input 1112. For example, a stream containing promotional material could be broadcast on this channel. In this case, when a non-privileged subscriber tunes to the channel, a request for the promotional material will be automatically generated and he or she will see the promotional material instead of a blank screen as would be provided in prior art systems. The economic benefit to the service provider is clear since channels that would typically not be available to a non-privileged customer can now be used to generate revenues by providing him/her with promotional material. Of course, as soon as any privileged subscriber tunes to this channel, the OD-NVOD server receives a request and switches from the promotional content to the movie stream. The non-privileged subscriber then loses her/his picture and may instead see a blank screen. Thus, the OD-NVOD server can be used more profitably than prior art NVOD servers." and insert the same on Line 53, after "channel." as a continuation of the Paragraph.
